

## Vascotube a Cirtec Company

Vascotube is entirely focused on the custom manufacturing of high quality, tight tolerances, specialty alloy tubes with an emphasis on Nitinol exclusively for medical devices. Vascotube is your expert in seamless medial tubing.

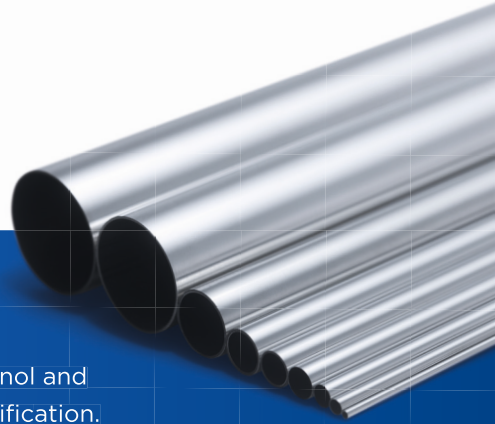

Vascotube processes tubing used in minimally invasive implantable medical devices such as artificial heart valves, peripheral vascular and neurovascular stents.

Vascotube's proprietary manufacturing process and strict focus on quality are key differentiators. In order to realize superior qualities and tightest tolerances, unique production methods have been developed and implemented.

**Vascotube has gained a lot of attention from customers who require:**

- Largest outer diameters
- Unique OD/WT ratio capabilities
- Highest surface smoothness
- Smallest folding depth of the inner surface
- Tightest wall tolerances
- Tightest concentricity tolerances

## Vascotube Services

- **Customized production:** We produce Nitinol and MP35N tubing according to your full specification. The tubing is in implantation class III for permanent implantation.
- **R&D Service:** The tubing for your R&D productions. We produce the tubing with individual dimension. Small quantities of 5 to 20m.
- **Fast Tubes List:** This is a special service for our customers' development and engineering departments offering small quantities and fast shipments. Various tubing sizes are available from our inventory. For all available tubes, please see our website **[www.vascotube.com](http://www.vascotube.com)**

## In-House Laboratory Services

**We offer our in-house laboratory capabilities to complete your requirements, e. g.:**

- Tensile testing at 20 °C or 37 °C
- DSC measurements
- Hydrogen content testing
- Af-Temperature measurements
- Laser marking of the tubing ends
